ADELEKE ENIITAN YETUNDE

Software Developer | Frontend Engineer | React / Next.js / JavaScript

Ibadan, Oyo, Nigeria | +234 902 746 3862 | eniitanyetunde@gmail.com | github.com/eniitanadeleke | LinkedIn

PROFESSIONAL SUMMARY

Frontend Engineer who builds, tests and maintains responsive web applications in React, Next.js, JavaScript, HTML5, CSS3 and Tailwind CSS. Has shipped live websites for businesses in agriculture, retail, property and faith communities and HR consulting, and builds in Next.js (App Router) with TypeScript. Experienced in REST API integration, authentication and role-based routing, state management, reusable component libraries, Git/GitHub collaboration and end-to-end QA. Uses GitHub Copilot and Claude for debugging and refactoring while checking output against requirements. Clear written communicator, comfortable working asynchronously in existing codebases.

TECHNICAL SKILLS

Programming & Web: JavaScript (ES6+), TypeScript, HTML5, CSS3
Frameworks & Libraries: React.js, Next.js (App Router), React Router, Context API, useReducer, Tailwind CSS, CSS Modules, Motion, Vite
Software Engineering: Responsive and mobile-first development, component-based architecture, REST API integration, authentication, role-based routing, state management, service-layer design, debugging, codebase navigation, cross-browser compatibility
Testing & Quality: Manual QA, end-to-end testing, test case documentation, bug reporting, regression checks, UI validation
Developer Tools: Git, GitHub, Vercel, GitHub Copilot, Claude
Ways of Working: Agile collaboration, code reviews, Figma-to-code, technical documentation, asynchronous communication, requirements analysis

PROFESSIONAL EXPERIENCE

Frontend Developer | Tiva Creative

- Build, refactor, test and maintain responsive web applications with React, Next.js, JavaScript, HTML5, CSS3 and Tailwind CSS, keeping components reusable and behaviour consistent across screen sizes.
- Translate client and product requirements into working features: reusable UI components, navigation flows, forms, search and filter experiences, and customer-facing pages.
- Integrate frontends with APIs and application workflows; troubleshoot defects and fix usability and responsiveness issues before release.
- Run end-to-end QA: write and execute test cases, reproduce and document defects, and verify fixes to reduce regressions.
- Use Git and GitHub branching across several concurrent projects, and report progress and blockers in standups, delivery reviews and asynchronous updates.

Frontend Developer | Lufemos Consults | *2021 - 2023*

- Developed and maintained React interfaces and dynamic web pages for client projects, turning requirements into responsive application experiences.
- Built responsive layouts and interactive features with JavaScript, HTML5, CSS3, Tailwind CSS and React across desktop and mobile.
- Collaborated through Git and GitHub for version control, code review, issue tracking and coordinated releases.
- Performed manual testing, debugging, accessibility checks and cross-browser validation before deployment.

SELECTED SOFTWARE PROJECTS

Sadaqua | Next.js Giving Platform (in progress) sadaqua.vercel.app

- Building the frontend of a mobile-first platform for givers, people requesting help and an admin team from a Figma design, using Next.js App Router route groups so each role has its own layout.
- Delivered sign-up, log-in and password reset with field-level validation, a giver home with naira totals and funding progress, and a browse-causes screen with search, category tabs, filters, sorting, and empty and error states.
- Designed a service layer that all screens call for data, so the real backend can replace sample data without changing the UI; built a reusable component kit with CSS Modules.

Staffora Global | Next.js + TypeScript HR Consulting Website staffora-gilt.vercel.app

- Built a six-page marketing website (home, services, about, case studies, masterclass, contact) for an HR consulting firm in Next.js App Router and TypeScript, working from the client's content document and brand book.
- Set up technical SEO: unique titles and descriptions per page, canonical URLs, social share images, a generated sitemap and robots.txt, and structured data for the organisation, services, reviews and events.
- Added scroll animations, counters and a testimonial slider with Motion that switch off for visitors who prefer reduced motion, and lead forms that post to a form service with an email fallback; exported as a static site.

THF Cocoa | React Client Website thfcocoa.com

- Built a seven-page responsive website for a vertically integrated cocoa producer, covering its story, two consumer brands, products, infrastructure and B2B trade, with shared layout and routing.
- Added WhatsApp enquiry buttons with pre-written messages per intent (customer, distributor, general) so sales leads arrive already sorted.

All Hours | React Retail Website allhour.vercel.app

- Built an eight-page website for a supermarket and pharmacy group, with a home page that routes shop owners, franchise applicants, suppliers and funders to their own paths.
- Presented six store formats under one visual standard, responsive from desktop to small phones.

One Place Properties | React Property Website

- Converted a static HTML site for a commercial property developer into a React and React Router app, redesigning it as a mobile-first property platform while keeping the client's copy and brand colours.
- Built a city and space-type search that opens pre-filtered listings, shareable filter URLs, saved listings, and booking forms that pre-select the chosen room and block past dates.

The Appointment | React Ministry Website theappointment.org

- Built a single-page website for an international prayer ministry meeting in 12 cities, with anchored sections for its mission, gathering schedule, sign-up and FAQs, responsive from wide desktop to small phones.

Eduspline | React Student Performance Platform (team project) eduspline-frontend-p95d.onrender.com

- Built the full frontend: landing pages, authentication, email verification, role-based routing, admin workflows and personalised student dashboards, integrated with a live REST backend.
- Implemented CSV upload, data visualisation, dropout-risk indicators and engagement metrics with React Router and Context API.

Recommender | React AI Book Recommender GitHub

- Built linked genre, mood and level selectors managed with useReducer, calling a small Express server that keeps the Gemini API key off the browser and returns six book suggestions with reasons.

Job Listings | JavaScript Filterable Job Board Live

- Rendered listings from JSON and built stacking tag filters with per-tag removal and clear-all, styled with Tailwind CSS.

EDUCATION

Certificate in Software Development (Frontend) | Tech4Dev, Women Techsters Fellowship | *Sept 2024 - Sept 2025*
Completed intensive training in React, JavaScript, modern frontend engineering, collaborative development, Git and GitHub.

B.Sc. Sociology | University of Ilorin | *Dec 2015 - Sept 2019*

CERTIFICATIONS

JavaScript Algorithms and Data Structures, freeCodeCamp | Responsive Web Design, freeCodeCamp | Software Development (Frontend), Axia Africa

ADDITIONAL STRENGTHS

Problem solving | Written communication | Attention to detail | Adaptability | Time management | Team collaboration | Continuous learning
